PanAfrican
CENTRE FOR CLIMATE CHANGE, CITIES, MOBILITY & SUSTAINABILITY

PANAFRICAN CENTRE FOR CLIMATE CHANGE, CITIES, MOBILITY AND SUSTAINABILITY

Company Profile

Vision Statement

To be a leading organization that promote a Climate-smart and sustainable future where cities thrive, human mobility is dignified, and African communities adapt to climate change with opportunities

Mission Statement

To catalyze transformative action in building knowledge, policies, and practices that address climate pressure, promote inclusive urban system and sustainable mobility, and equitable opportunity for people on the move

Our Purpose

a) Advance Climate Resilience through research, Promotion of innovative indigenous knowledge and strategies, capacity development and advocacy for sustainable Mobility/Migration, Urban Heritage and Leadership and sustainable action in Africa.

b) Create the Network of leadership/mentorship opportunity and Building a community of practice to solve peculiar Africa migration, climate, City heritage and Sustainability related issues

c) Collaborate for action on sustainable climate safety, sustainable migration, urban resilience globally with relevant stakeholders

d) Mobilise globally and expend resources, through linkages, grants, collaborations, sponsorship and donations, etc from all legitimate sources.

e) Undertake consultancy, training, conferences, projects, programmes and interventions and promote scholarships to uncover potentials for climate safety, migration opportunities and leadership for sustainable regional development;; and

f) advocate for entrepreneurial opportunities for job creation and access to funding/scholarship for youths, gender and people with special needs in thematic areas

About Us

The idea for the NGO began more than **15 years ago**, rooted in a growing awareness of climate change impacts on urban environments and sustainability challenges. Early efforts involved informal research, networking among urban planners, environmentalists, and community leaders concerned about sustainable city development amid global warming trends.

Throughout the years, the concept evolved with increasing urgency as climate science advanced and cities faced intensifying risks like flooding and pollution. Milestones included participation in climate conferences, forming strategic partnerships, and piloting local sustainability projects.

Challenges encountered involved securing sustained funding, overcoming bureaucratic hurdles, and balancing diverse stakeholder interests. Despite delays, the founders remained committed, culminating in the formal incorporation of the NGO in **2025** with a clear mission to address climate resilience, urban sustainability, and equitable development.

Since incorporation, the NGO has focused on expanding its programs, engaging policymakers, and scaling innovative solutions, embodying both the learned experience and persistent vision formed over its lengthy evolution.

Here is a chronological timeline with **8 milestone** entries for a climate change, cities, and sustainability NGO founded after 15 years of conception and incorporated in 2025: 2010 - Idea Conception: Initial discussions and informal research on urban climate resilience and sustainable city planning begin among a core group of environmentalists and urban planners.

2012 - Network Formation: Early partnerships formed with academic institutions, NGOs, and community organizations focused on climate and urban sustainability. 2015 - Pilot Projects: Launch of small local initiatives testing sustainable urban interventions and climate adaptation strategies in vulnerable city areas.

2017 - Strategic Planning: Development of a formal vision and mission, drafting of a strategic framework to guide future activities. 2019 - Funding Challenges: Attempts to secure consistent funding face hurdles, prompting revisions in organizational approach and outreach.

2021 - Policy Engagement: Increased advocacy efforts with local governments and international climate forums to elevate urban sustainability on the agenda. 2023 - Capacity Building: Expansion of community training programs and stakeholder workshops in climate adaptation and sustainable urban development.

2025 - Formal Incorporation: Official registration and incorporation as an NGO with a clear mandate to champion climate resilience, sustainable cities, and equitable development.

This timeline reflects key phases of idea development, partnerships, implementation, challenges, and formalization essential in the NGO's evolution and impact strategy. Each milestone marks critical growth or turning points toward establishing a recognized organization.

Founder's statement

As we formally launch our NGO in 2025, we stand at a pivotal moment filled with hope and determination. Over 15 years in the making, this organization embodies a vision for resilient and sustainable cities where people and the planet thrive together. While the challenges posed by climate change and urbanization are immense, we believe in the power of innovation, collaboration, and community to create meaningful change.

Our journey here was shaped by many obstacles that strengthened our resolve and deepened our commitment. Today, we look forward with optimism, knowing that every action taken, every partnership built, and every policy influenced brings us closer to a healthier, more equitable future. Together, we will transform cities into beacons of sustainability, innovation, and justice—for current and future generations. The best is yet to come, and we are ready to build it.

Jimoh Musa Yusuf, Ph.D

Founder/Chief Executive Officer

Products and Services and Solutions Offered

A climate change, cities, human mobility, and sustainability organization typically offers a range of products, services, and solutions aimed at building climate resilience and sustainable urban environments while addressing migration and displacement issues linked to environmental change.

Core offerings

Research and Policy Advocacy

Producing scientific studies, policy briefs, and strategic recommendations to influence sustainable urban planning, climate adaptation, and human mobility frameworks.

Capacity Building and Training

Workshops, seminars, and training programs for local governments, communities, and stakeholders on climate-smart urban development, disaster risk reduction, and inclusive migration governance.

Community Engagement and Empowerment

Facilitating grassroots involvement, participatory planning, and awareness campaigns to ensure vulnerable populations are included in resilience and sustainability efforts

Project Development and Implementation Support

Designing and managing pilot projects on clean energy, green infrastructure, climate migration support services, and disaster preparedness in urban contexts.

Data and Information Services

Providing climate risk assessments, migration trend analyses, and sustainability metrics to guide decision-making.

Partnerships and Networking

Connecting local, national, and international actors to foster collaborative climate action and sustainable development goals.

These services address the complex nexus of climate, urbanization, and human mobility challenges with innovative, inclusive, and evidence-based approaches.

Core Program Areas

- Climate Resilience and Adaptation in Urban Areas
- Sustainable Urban Planning and Green Infrastructure
- Human Mobility and Climate Migration Support
- Community Engagement and Capacity Building
- Policy Advocacy and Research on Climate, Cities, and Migration
- Data Collection, Monitoring, and Climate Risk Assessment
- Partnerships for Sustainable Development and Climate Action

Flagship Projects

Urban Climate Resilience Pilots

Implementing nature-based solutions and green infrastructure in vulnerable urban neighborhoods.

Climate Migration Support Network

Providing resources and legal, social, and economic support to climate-displaced populations

Sustainable City Innovation Hubs

Facilitating technology and knowledge exchange for clean energy, water, poverty alleviation and sustainable transport.

Participatory Urban Planning Workshops

Engaging communities in climate-smart decision-making processes.

Climate Policy Impact Dialogues

Multi-stakeholder forums shaping local and national climate and migration policies.

Urban Climate Data Observatory

Collecting and analyzing data on urban climate risks and human mobility trends.

These programs and projects focus on integrated, practical solutions to complex climate and urban challenges

Key Partner Organizations and Funders for Each Core Project:

	Partners	Funders
Urban Climate Resilience Pilots	Local governments, urban planning agencies, environmental NGOs	Multilateral development banks (e.g., World Bank), climate funds (e.g., Green Climate Fund)
Climate Migration Support Network	Humanitarian organizations, migration agencies (e.g., IOM), legal aid groups	UN agencies, international foundations focused on migration and human rights
Sustainable City Innovation Hubs	Universities, tech startups, clean energy companies	Research grants, private sector innovation funds, government innovation programs
Participatory Urban Planning Workshops	Community-based organizations, local authorities, civil society coalitions	Local government grants, international donors supporting civic engagement
Climate Policy Impact Dialogues	Policy think tanks, advocacy networks, governmental climate offices	Policy-oriented foundations, international cooperation funds
Urban Climate Data Observatory	Data analytics firms, meteorological agencies, academic institutions	Tech philanthropy, research councils, climate data funds

Effective collaboration with these partners and securing diversified funding aligns resources with project goals, enhances impact, and drives sustainability.

Future targets and the core principles:

These goals and principles align the organization's vision with actionable, ethical, and impactful operations.

- Establish resilient urban communities that effectively adapt to climate change impacts by **2030.**
- Scale innovative sustainable city solutions incorporating human mobility considerations across the regions within five years.
- Influence global and national policies to integrate climate resilience and equitable migration frameworks by **2028.**
- Build strong local capacities through training and knowledge-sharing programs engaging at least **10,000** community members by **2030.**
- Develop a comprehensive urban climate data platform accessible to policymakers, researchers, and communities by **2027.**

Our Core Principles

A climate change, cities, human mobility, and sustainability organization typically offers a range of products, services, and solutions aimed at building climate resilience and sustainable urban environments while addressing migration and displacement issues linked to environmental change.

Collaboration

Foster inclusive partnerships among governments, communities, academia, and the private sector.

Equity

Prioritize vulnerable populations and ensure fair access to resources and opportunities.

Innovation

Embrace science, technology, and creative approaches to solve complex challenges.

Transparency

Maintain open communication, accountability, and ethical governance.

Sustainability

Promote long-term environmental, economic, and social wellbeing.

Empowerment

Build local ownership and leadership in resilience and adaptation efforts.

Business Objectives and Strategy

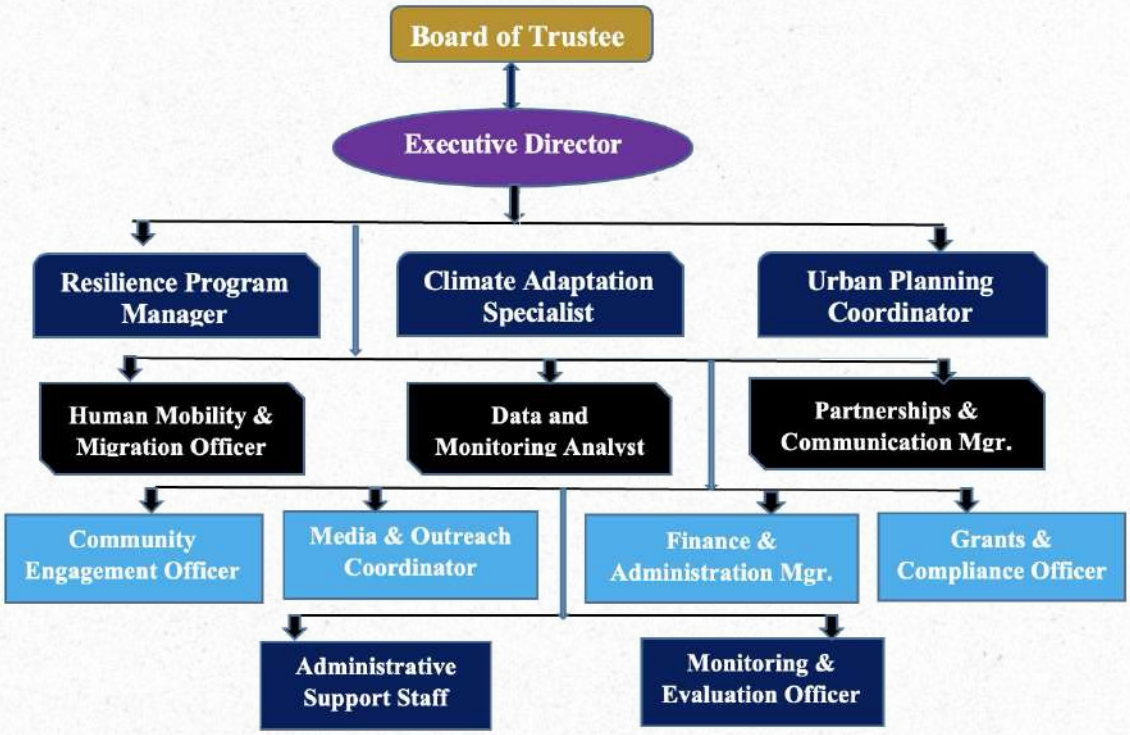

Goals the company aims to achieve and the strategic approach for growth.

Organizational Structure

Overview of Management and Ownership:

The organization is governed by a Board of Directors responsible for strategic oversight, policy approval, and fiduciary duties. The Board comprises diverse members from sectors including academia, government, civil society, and private industry, ensuring balanced representation of expertise and stakeholder interests. Executive leadership is headed by an Executive Director who oversees day-to-day operations, program implementation, and staff management. Core management includes Program Directors responsible for key thematic areas like climate resilience, urban sustainability, human mobility, and data analytics, supported by technical and administrative teams.

Organizational Chart

This structure allows clear roles and reporting lines, balancing specialized expertise It promotes collaboration across thematic areas and efficient program delivery. Task teams will be formed under program managers to address specific projects or geographic zones, fostering both resilience and adaptability in operations.

Role Descriptions and Key Skills for Each Resilience Team Position:

	Role	Skills
Executive Director	Oversees overall strategy, operations, and governance; leads external relations.	Strategic leadership, communication, stakeholder engagement, decision-making, financial acumen.
Resilience Program Manager	Manages program design, implementation, and reporting across resilience projects.	Project management, climate adaptation expertise, team leadership, monitoring & evaluation.
Climate Adaptation Specialist	Provides technical expertise on climate risks, adaptation strategies, and resilience measures.	Climate science, risk assessment, environmental planning, data analysis.
Urban Planning Coordinator	Coordinates sustainable urban development initiatives integrating resilience principles.	Urban planning, GIS skills, stakeholder coordination, regulatory knowledge.
Human Mobility and Migration Officer	Manages programs addressing climate-induced migration and displacement.	Migration policy, social science research, community engagement, advocacy.
Data and Monitoring Analyst	Collects, analyzes, and reports climate and project-related data for decision-making.	Data analytics, statistics, database management, visualization.
Partnerships and Communications Manager	Builds and manages partnerships; leads communications and outreach efforts.	Networking, communication strategy, marketing, public relations.

	Role	Skills
Community Engagement Officer	Facilitates participatory processes and empowers local stakeholders.	Facilitation, cultural sensitivity, conflict resolution, grassroots mobilization.
Finance and Administration Manager	Oversees budgeting, financial reporting, and administrative support.	Financial management, organizational skills, compliance, bookkeeping
Monitoring & EvaluationOfficer	Designs and implements M&E frameworks to assess program effectiveness.	Evaluation methods, indicators design, reporting, impact analysis.

Each role requires a blend of technical expertise, leadership ability, communication skills, and adaptability to manage dynamic resilience projects effectively.

Key Clients and Audience:

The primary clients and audience include:

a) Local and Regional Governments: Seeking expertise and solutions for urban resilience, climate adaptation planning, and migration management.

b) International Development Agencies and Multilateral Donors: Funding climate resilience and sustainable urbanization projects.

c) Private Sector Corporations and SMEs: Engaged in climate risk management, sustainable supply chains, and corporate social responsibility.

d) Humanitarian and Migration Organizations: Implementing programs for climate-induced displacement and mobility.

e) Academic and Research Institutions: Partners for data, analysis, and innovation in climate and urban studies.

f) Community-Based Organizations and Civil Society: End-users and collaborators in community resilience building.

g) Financial Institutions and Impact Investors: Interested in funding climate adaptation and sustainability solutions.

h) **Technology Providers and Innovators:** Markets for pilot collaborations and sustainable urban solutions.

i) **Policy Makers and Advocacy Groups:** Customers of research, policy dialogues, and advocacy support.

j) **General Public and Media:** Indirect customers influenced through awareness, education, and engagement campaigns.

The diverse client requires tailored services addressing climate risks, urban development, human mobility, and sustainability challenges with measurable impact and innovation.

Our Smart, Inclusive, and Sustainable Cities Engagement

This involves the following integrated actions across technology, governance, and community empowerment:

a) **Promote Participatory Planning:** Involve diverse community groups in decision-making to ensure inclusive urban development that meets all residents' needs.

b) **Implement Smart Technologies:** Use IoT, data analytics, and digital platforms for efficient energy management, traffic control, waste reduction, and public services.

c) **Foster Sustainable Infrastructure:** Develop green buildings, renewable energy systems, efficient public transit, and accessible green spaces to reduce environmental impacts.

d) **Encourage Policy Integration:** Advocate for policies aligning urban growth with sustainability goals, social equity, and climate adaptation.

e) **Build Cross-Sector Partnerships:** Collaborate with governments, private sector, academia, and civil society to share knowledge, resources, and innovations.

f) **Support Capacity Building:** Provide education and training for local authorities and communities on sustainable urban practices and technology use.

g) **Prioritize Equity and Accessibility:** Design urban services and infrastructure to be accessible and beneficial to vulnerable and marginalized populations.

h) **Monitor and Adapt:** Use data-driven monitoring to assess urban sustainability indicators and adapt strategies dynamically.

Our intention is to combine technology, inclusive governance, and sustainable development principles, so that cities can become resilient, livable, and equitable for all residents.

Our engagement in renewable energy

This involves the following integrated actions across technology, governance, and community empowerment:

a) **Increase Awareness and Education:** Understand different renewable sources like solar, wind, hydro, and biomass. Promote awareness through seminars, workshops, and informational campaigns.

b) **Develop Partnerships:** Collaborate with government agencies, private sector companies, research institutions, and communities to promote renewable energy projects.

c) **Invest in Renewable Projects:** Allocate funding or seek grants and incentives for renewable energy installations such as solar panels, wind turbines, and bioenergy systems.

d) **Incorporate Policy Advocacy:** Support policies that incentivize renewables, like tax credits, subsidies, and feed-in tariffs, to accelerate adoption.

e) **Implement Pilot Projects:** Start small-scale renewable energy projects to demonstrate viability and effectiveness.

f) **Utilize Technology and Innovation:** Adopt cutting-edge renewable energy technologies and participate in research and development.

g) **Engage Communities:** Mobilize local communities through education, employment opportunities, and participatory decision-making.

h) **Measure Impact:** Track energy savings, emissions reductions, and economic benefits to demonstrate success and attract further support.

We hold very strongly that active involvement at all levels from individual choices to policy advocacy can significantly accelerate renewable energy adoption and contribute to sustainable development.
